CLINICAL AND LABORATORY OBSERVATIONS
DURING THE INITIAL PERIOD OF TREATING
DIABETICS WITH D 860. [1962] [5]p.
Order from SLA \$1.10 62-14933

Trans. of Deutsche Medizinische Wochenschrift (West
Germany) 1957, v. 82 [no. 36] p. 1526-1528.

DESCRIPTORS: *Drugs, *Diabetes, *Toxicity,
Insulin

With the initiation of D 860 therapy in diabetics, side
effects including undesirable side effects on the albu-
min metabolism and the plasma amino nitrogen were
rarely observed or not observed at all. We found a
temporary increase in water and sodium diuresis, the
possible causes of which were discussed. We reported
the clinical observation of a diabetic with nephropathy

Extensive hemotological examinations were made of
33 diabetics being treated with tolbutamide (period of
therapy - 4 to 20 months). No significant differences
were found between diabetics treated with insulin and
tolbutamide in so far as hematology is concerned.

Pancreas, Cells (Biology), *Insulin, Toxicity.

After a single dose of D 860, the beta cells show pro-
nounced degranulation and loss of insulin. This insulin
loss is compensated 3 hours after D 860 has been ad-
ministered due to new production of the hormone. At
the same time, a maximum increase in nucleus size is
found in the beta cells. The alpha cells participate in
this process, through nucleus size enlargement and

63-14766

Trans. of Deut[sche] Med[izinische] Wochenschr[ift]
(West Germany) 1961, v. 86, p. 1596-1599.

DESCRIPTORS: Therapy, *Infants, Diseases,
Intestines, *Escherichia, Drugs, Antibiotics,
*Colimycin.

Most infantile enteritis is of infectious nature. The most common causal microorganisms are to be considered the enteropathogenic coli types (dyspepsia coli bacteria), whose distribution over the entire earth is ubiquitous. In Germany about 30 to 40% of all infantile enteritis is caused by dyspepsia coli (Biological Sciences--Pharmacology, TT, v. 10, no. 4)

A SIMPLIFIED "GASTRACID" TEST. [1962] 5p.

11 refs.

Order from SLA \$1.10

63-10042

Trans. of Deutsche Med[izinische] Wochenschrift.
(West Germany) 1962, v. 87, no. 3, p. 1613-1614.

DESCRIPTORS: *Stomach, Secretion, *Acids, Test
methods, Urine, Medical procedures, *Colorimetry,
Drugs, Caffeine, Pyridines.

A simplified form of the "Gastracid" test is described:
no control urine sample is required. After a red colour
of the acidified urine has developed, alkalinity is
achieved by adding sodium hydroxide. If the red colour
disappears, the test is positive and a control urine
sample need not be tested. 50 control tests were per-
formed to show that, if desired, a cup of Nescafe can
take the place of the caffeine tablet. In patients con-
fined to bed this is in fact preferable. (Author)
